

24 HOUR PLUG-IN MECHANICAL TIMER

DESCRIPTION:

A 24-hour plug-in mechanical timer is a compact device that allows you to automate the on/off function of electrical appliances or devices. It features a mechanical dial or switches that lets you set specific times for your devices to be powered on or off within a 24-hour cycle. The timer is easy to use and requires no batteries, simply plug it into an electrical outlet and connect your devices. It's an efficient and cost-effective solution for managing power consumption, controlling lights, pumps, fans, and other devices based on your desired schedule.

FEATURES:

- SKU: NUR-LT-LT407M
- Compatible with NUR-LT transformers.
- Mechanical dial or switch for easy programming.
- 24-hour timing capability for precise scheduling.
- Plug-in design for convenient installation.
- No batteries or external power source required.
- Compact and space-saving.
- Suitable for various electrical appliances and devices.
- Helps save energy by controlling device operation.
- Reliable and durable construction for long-lasting use.

APPLICATIONS:

- Landscape light
- Outdoor light
- Indoor light
- Commercial Light
- Residential light

TECHNICAL SPECIFICATIONS:

Input Voltage	110V AC
Material	PVC
